¹Calculation based on low end of burst pressure tolerance

| | |
|---------------|---|
| CV-F | Design offers 100% venting area |
| CV-FS | Designed with integral support to withstand vacuum or back-pressure up to the static burst pressure of the vent panel |
| CV-FSB | Designed to be used with support bars in the inlet frame, used when vacuum or back-pressure exceeds the static burst pressure of the vent panel |

All ZOOK explosion vents are tested in accordance with the National Fire Protection Association standard NFPA 68 and meet the low mass per unit area requirement "The weight of the vent closure shall not exceed 2.5 lbs/sq. ft. of free vent area."
