

Cast steel valves gate, globe, and check

**ASME CLASSES 150 – 1500
NPS 2 – 64 (DN 50 – 1600)
API 600 / 623 / 594 / ASME B16.34**

VELAN

VELAN'S PROFILE

VELAN AT A GLANCE

History

- Founded in 1950

People

- Over 1,800 employees

Product line

A world-leading range of valves across all major industrial applications

- Cast steel gate, globe, check, and ball valves
- Forged steel gate, globe, check, and ball valves
- Triple-offset butterfly valves
- Knife gate valves
- Severe service valves
- Bellows seal valves
- Steam traps

Primary industries served

- Fossil, nuclear, and cogeneration power
- Oil and gas
- Refining and petrochemicals
- Chemicals and pharmaceutical
- LNG and cryogenics
- Marine
- HVAC
- Mining
- Water and wastewater
- Pulp and paper
- Subsea

Velan holds major applicable approvals:

- ASME Section III N and NPT for nuclear valves (since 1970)
- ISO 9001 (since 1991) and ISO 14001
- OHSAS 18001
- PED
- SIL
- GOST
- API 6A and API 6D
- TA-Luft
- Comprehensive quality programs that are compliant with the most stringent industry standards such as ISO 9001, API Q1, API 624, NCA 4000, ASME NQA-1, and 10 CFR 50 Appendix B.
- Velan has been surveyed and audited by leading organizations around the world such as Bureau Veritas, API, ASME, NUPIC, Newport News Shipbuilding, and DCMA.
- Total Process Improvement Program, including Lean Manufacturing and Six Sigma.

Velan is one of the world's leading manufacturers of cast and forged steel gate, globe, check, ball, triple-offset, knife gate, highly engineered severe service valves, and steam traps offering superior performance across all major industrial applications including: fossil, nuclear, and cogeneration power; oil and gas; refining and petrochemicals; chemicals and pharmaceutical; LNG and cryogenics; marine; HVAC; mining; water and wastewater; pulp and paper; and subsea. The company also supplies actuators and integrated control packages.

Founded in 1950, Velan has earned a reputation for product excellence and innovation by bringing to the market superior products with special emphasis on quality, safety, ease of operation, and long service life. Velan valves have an extremely broad installation base and are approved by major companies worldwide.

Velan concentrates on one business—the design, manufacture and marketing of steel valves and steam traps in a broad range of types and sizes for high performance service in a wide range of applications. The company's talented people are focused on Velan's core values of quality, reliability, innovation, and integrity and mission to be the world's leading valve brand.

(1) For gate valves larger than NPS 42 (DN 1050), in pressure class 150 and 300, and gate valves larger than NPS 24 (DN 600) in pressure class 600 and greater, wall thickness is based on B16.34 plus additional wall thickness allowance.

Valves comply with API 600.

Valves comply with API 623.

Valves comply with API 594.

GASKET MATERIALS

VALVE TYPE	MATERIAL
Gate ⁽¹⁾	Class 150: corrugated steel/graphite except NPS 2–2½ (DN 50–65) spiral wound Class 300–1500: spiral wound stainless steel and graphite
Globe	Spiral wound stainless steel and graphite
Check	Spiral wound stainless steel and graphite

NOTE:

CoCr alloy as used throughout this catalog refers to cobalt chrome hardfacing alloys.

(1) Flanged end ratings terminate at 1,000°F (538°C) for Class 150.

TOTAL QUALITY AND PROCESS IMPROVEMENT

Velan's number-one priority is quality. From order entry to design engineering to the shop floor, the entire company is totally committed to offering products and services that not only meet but exceed customer expectations. All Velan valves are designed and manufactured with an emphasis on low emissions, safety, simple maintenance, ease of operation, and, above all, long and reliable service life.

VELAN

▼ Total Quality Commitment ▼

Velan Total Quality Program

Our aim is to offer products and services that not only meet but clearly exceed the expectations of our customers.

Through training, teamwork, and performance, our employees strive to achieve continuous improvement of all processes.

Our goal is Total Quality and On-time Delivery; our method is Total Commitment.

A.K. Velan,
Founder of Velan

Total Process Improvement

While Velan has always made quality a priority, in 1990 the company adopted a formal Total Quality Management Program, aimed at improving production processes and was awarded ISO 9001 status the following year.

Today, Velan's **Total Process Improvement Program** brings together a group of industry best practices, including **Lean Manufacturing** and **Six-Sigma**, with the goal of creating a more balanced and efficient production system.

CERTIFICATIONS AND APPROVALS

- ASME N/NPT (since 1970)
- ISO 9001 (since 1991)
- ISO 14001
- OHSAS 18001
- TR-010 and TR-032
- PED
- API
- SIL
- TA-Luft

6 Systems ensure the final quality goals

1. Design

All valves are designed to comply with the requirements of ASME B16.34, the API standards, and special customer requirements, as applicable.

2. Quality assurance

Every step from procurement through production, welding, assembly, testing, and packaging is in accordance with written quality programs and procedures—an ASME Section III manual for code valve production and an ISO 9001 QA manual for all other production. Velan's four North American plants are certified to ISO 9001 and five plants have ASME N type certificates of authorization. Velan has been fully approved to supply CE marked valves in accordance with the PED (European Pressure Equipment Directive). Orders are reviewed by the Engineering and QA departments and all special customer requirements are incorporated into QCI (Quality Control Instructions) issued for each project. The QA Department also maintains calibration and gauge-control systems, and trains and qualifies skilled welders and NDT inspectors.

3. Quality control

The QC Department is responsible for all aspects of quality, from receiving of material to control of machining processes, welding, nondestructive examination, assembly, pressure testing, cleaning, painting, and packaging. When required, a permanent record of all completed quality goals is prepared and sent to customers in the form of a "Valve Data Package."

4. Pressure testing

Each valve is pressure tested in accordance with ASME B16.34, API 598, or special customer requirements as applicable. In all plants test status is integrated into production control/inventory management software.

5. Improvement teams

Continuous improvement teams at point of manufacturing ensure quality at source, process control, higher quality workmanship, and operator ownership.

6. Qualification testing

A key to reliability is the performance of functional qualification tests. These tests are performed on all valves to determine reliability and service life.

Certifications and approvals

Velan holds major applicable approvals, including ASME N/NPT, ISO 9001, ISO 14001, OHSAS 18001, PED, API, SIL, TA-Luft, etc. Velan designs and manufactures valves in accordance with ASME B16.34 and other recognized International standards such as API and ASME Section III; we implement comprehensive quality programs that are compliant with the most stringent industry standards such as ISO 9001, API Q1, NCA 4000, ASME NQA-1, and 10 CFR 50 Appendix B.

Velan has been surveyed and audited by leading organizations around the world such as Bureau Veritas, API, ASME, NUPIC, Newport News Shipbuilding, and DCMA.

VELAN CAST STEEL VALVES

Tight shutoff and low emissions for the process and power industries

Velan's comprehensive line of cast steel gate, globe, and check valves features leading-edge design, engineering, and manufacturing technology. Our valves meet the most stringent national and international standards for fugitive emissions including API 624 and ISO 15848-1.

Our gate, globe, and check valves are widely used in many industries including:

- **Process industries:** oil, chemical, petrochemical, refining, pulp and paper, pharmaceutical, mining, food processing, and water treatment.
- **Power industries:** nuclear, fossil fuel (coal and gas), and renewable and district heating.
- **Upstream and midstream industries:** Offshore production platforms, LNG liquefaction and regasification terminals, tankers carriers and tank farms, and ship-building.

Cast steel valve installation at an oil refinery.

Carbon steel gate valve, ASME Class 600 used for boiler feed water installation at a hydrogen plant in Texas.

A geothermal power plant valve installation for sour gas service.

Gate valves in service for a boiler feed installation.

FUGITIVE EMISSION QUALIFICATION

The importance of fugitive emission (FE) testing and qualification

In a typical petroleum plant, 60% of fugitive emissions are from valves. Therefore it is extremely important to reduce valve emissions to the greatest degree possible. The four widely recognized standards regarding valve fugitive emissions for gate and globe cast steel valves are API 622, API 624, ISO 15848-1 and ISO 15848-2.

API 622

The primary intention of API 622 is to qualify performance of graphite packing sets, from the perspective of FE, stem corrosion and packing material properties. These tests are typically performed in test fixtures.

API 624

The primary intention of API 624 is to type test multi-turn valve designs equipped with graphite packing to a maximum of 100 ppm FE using Methane gas and EPA method 21.

ISO 15848-1

The primary intention of ISO 15848-1 is to type test the valve design for FE using either Helium or Methane gas. This specification provides numerous testing parameters and FE performance options, which need to be specified or agreed between valve buyer and manufacturer.

ISO 15848-2

The primary intention of ISO 15848-2 is to specify production testing requirements for FE performance of newly produced valves, in production and from a QA/QC perspective.

API standard 624 FE test in a valve

We certify that Velan API 600 gate and API 623 globe valves have been qualified to API Standard 624 *Type Testing of Rising Stem Valves Equipped with Flexible Graphite Packing for Fugitive Emissions*.

Certified test reports and performance results are available upon request.

Note that valves greater than NPS 24 (DN 600 and API 594 check valves do not fall under the scope of the API 624 standard so the valves are not marked API 624 but utilize the same low fugitive emission technology.

All API 624 qualified valves use API 622 qualified packing sets.

ISO 15848-1 type test and ISO 15848-2 production tests

In addition to API 624 qualification, Velan has also dual qualified its API 600 gate and API 623 globe valves to ISO 15848-1 class A with methane gas.

Contact us for specific solutions regarding ISO 15848-1 with Helium gas as well as ISO 15848-2 production test requirements.

Velan's API 624 research and development test lab. Velan's R&D department is fully equipped for testing API 624, API 622, ISO 15848-1, and ISO 15848-2 as well.

All our FE qualification reports are either third party witnessed or performed at an independent laboratory. Velan also provides a low fugitive emissions certificate for Velan API 600 gate, API 623 globe, and API 594 check valves.

DESIGN OF STEM SEALS

Velan offers standard cast steel bolted bonnet gate and globe valves that are qualification tested for compliance with EPA fugitive emissions regulations, API 622, API 624, as well as ISO 15848-1

The Velan stem seal evolved from these test findings:

- **Ensures leakage of less than 100 ppm** as demonstrated through extensive laboratory testing.
- Velan's low emission valve technology meets latest standards requirements, with a design optimized for extended service life:
 - a. Lower compression packing design reduces friction and allows more room to re-torque in the field;
 - b. Rugged packing gland to withstand continued field maintenance and provides lower total cost of ownership;
 - c. Optimized packing ring construction for excellent sealing and a corrosion inhibitor which demonstrated no corrosion indication based on API 622 tests.
- **Tight clearances and tolerances between vital parts.**
- **Precision stem and packing chambers.**
Straightness, roundness, and fine finish of the stem and packing chamber wall are essential.
- **Short and narrow packing chambers improve sealing.**
- **Stem and packing chamber walls.**
Superior burnished surface finish for the stem and packing chamber.
- **Hardened stem for longer life.**

Live-loading options

Velan has extensive experience in valve live-loading.

The original live-loading concept was developed by Velan in 1972 in a research project for AECL to eliminate leakage in nuclear service. Velan has been supplying live-loaded valves for Nuclear and non-nuclear service for over 40 years.

- **Live-loading.**
Two sets of belleville springs extends the low emission service life especially in service with large pressure/ temperature transients or frequent cycling.
- **Leak-off.**
For critical service, a lantern ring and double packing can be provided with a leak-off connection. The leak-off is provided to allow collection of leakage from the lower packing set.

CAST STEEL VALVE BODY-BONNET DESIGN

Gasket design for gate valves with oval flanges

Standard corrugated steel gaskets without graphite as specified in API 600 were found to be an unacceptable choice for low emission service, even under ideal laboratory test conditions, and regardless of the flange finish and gasket load.

After testing several alternative gaskets, we selected the best performing gasket in our tests—a **corrugated steel gasket with graphite-filled channels** as illustrated below.

Oval body-bonnet gasket

Design features

- We certify that this gasket has been qualified to meet the requirements of API 624.
- Requires no retorquing after long cycling.
- Effective under wide fluctuations of temperature and pressure.
- Insensitive to flange finish.
- Steel walls of graphite channels provide additional protection from oxidation, corrosion, and blow-out.
- Seal offers the advantage of flexible graphite (0–14pH, -328°F to +2,000°F).
- Low stress sealing capability.
- Modern torquing methods.

Gate	Class 150	NPS 2–64 (DN 50–600)
------	-----------	----------------------

Gasket design for gate valves with round flanges

Round body-bonnet gasket

Fully-encased spiral wound 316 or 347 SS/graphite body-bonnet gasket ⁽¹⁾.

Design features

- Full enclosure to allow gasket to retain positive radial support during loading.
- We certify that this gasket has been qualified to meet the requirements of API 624.
- Accurate control of compression through close tolerance of gasket groove and allowance for radial expansion.
- No radial machine marks.
- Close tolerance ($\pm 0.005''$ or 0.13 mm) for gasket thickness.
- Seal offers the advantage of flexible graphite (0–14pH, -328°F to +2,000°F).
- Modern torquing methods.

Gate	Class 150 Class 300–1500	NPS 2–2½ (DN 50–65) NPS 2–36 (DN 50–900)
Globe	Class 150–600	NPS 2–16 (DN 50–400)
Check	Class 150–1500	NPS 2–36 (DN 50–900)

(1) Other materials are available.

VELAN API 600 GATE VALVES

FLEXIBLE WEDGE VERSUS SOLID WEDGE

Flexible round wedge pioneered by Velan

- Universal use for temperatures up to 1,000°F (538°C).
- Flexibility compensates for seat face distortion.
- Compensates for deformation of body due to pipe stresses.
- Long cycle life.
- Ideal for processes with large temperature fluctuations.
- Assures valve tightness on both seats over wide range of pressures.
- Stem-to-wedge connection is inside the seating faces supporting the wedge ears during opening. More robust with less mass.

Classical solid wedge on competitive designs

- Wedge may cause severe jamming at temperatures over 200°F (93°C).
- Suitable for small valves NPS ½ –2 (DN 15–50).
- Wedge will stick when valve is closed hot and allowed to cool.
- No compensation for deformation of body due to pressure-temperature or pipe stresses.
- Difficult to make valve tight on both seats due to seat face distortion.

SEAL WELDED SEATS

Velan standard ground and lapped seal welded seat rings faced with CoCr alloy

- Pioneered by Velan and considered state-of-the-art technology.
- Welded-in leakproof. Weld quality 100% tested.
- CoCr alloy seating faces for long service life.
- Seat surface ground and lapped after weld-in.
- Standardized use for steam up to 1,000°F (538°C), oil and gas.
- CoCr alloy face will wear less than the 13Cr wedge, which can easily be repaired or replaced.

API 600 GATE VALVE SEAT TIGHTNESS

- Welded-in CoCr alloy faced seats and a flexible wedge in 13Cr, SS 316, Monel, or hardfaced with CoCr alloy.
- Seating faces ground and lapped to 2 RMS.

Factory acceptance standard for gate valve seat leakage

Size		Multiplier K		
		Velan standard	API 598 – 2009	
NPS	DN		Low-pressure test	High-pressure test
≤ 2	≤ 50	0	0	0
2½–12	65–300	0	4	2
14 ≥	350 ≥	2	4	2

Allowable leakage = (K) x (NPS)

Bubbles/min. for low-pressure test
Drops/min. for high-pressure test

VELAN API 623 GLOBE VALVES CONICAL SEATS

- Line contact seal.
- Non-rotating stem, torque arm and a body guided disc – easily adaptable to actuation and easier to seal.

- Seat has good elasticity.
- Low closing torques.
- Ideal for high pressure-temperature.

VELAN API 594 SWING CHECK VALVES

Swing check disc assembly detail

- Cage unit design with no penetration of body prevents:
 - a) No possibility of leakage with gasketed or packed hinge pin.
 - b) No possibility of pin ejection.

- All parts are accessible from the top for easy servicing.
- Welded-in seat faced with CoCr alloy.
- Non-rotating disc.
- Ground and lapped seating surfaces.

* CoCr alloy as used throughout this catalog refers to cobalt chrome hardfacing alloys.

(5) For eye bolts F316, for studs B8M or 630 is used.

Design features

- **Universal trim.** 13Cr stem, wedge in CA 15 or 13Cr faced, and CoCr alloy faced seat API Trim 8 suitable for applications up to 850°F (454°C).
- **Seat face** CoCr alloy hardfaced, ground, and lapped to a mirror finish.
- **Flexible wedge** with low center stem-wedge contact, in solid CA15 (13Cr) or hardfaced with 13Cr, SS 316, Monel or CoCr alloy. Wedge is ground and lapped to a mirror finish and tightly guided to prevent dragging and seat damage. A CoCr alloy hardfaced CF8M wedge is also available.
- **Non-rotating stem** with precision ACME threads and burnished finish. Double ACME for faster operation.
- **Body and bonnet joint** accurately machined. Gasket materials on page 4, details on page 9.
- **Body and bonnet** castings are precision machined. One-piece bonnet⁽¹⁾ for better alignment and fewer parts.
- **Gland** has two-piece construction for easy alignment.
- **Flanges:**
ASME Classes 150–300: 1/16" raised face.
ASME Classes 600–1500: 1/4" raised face.
Finish 125–250 AARH for all valves.
- **Rotating stem nut** is Austenitic ductile iron Gr. D-2C renewable in line (as shown). Thrust bearings are supplied as follows:
ASME Classes 150–300:
NPS 10–12 (DN 250–300), 1 bearing (top)
NPS 16 (DN 400) and up, 2 bearings
ASME Classes 600–1500: NPS 6 (DN 150) and up.

(1) One-piece bonnet for Class 150 up to NPS 16 (DN 400) and Class 1500 up to NPS 6 (DN 150) only.

VELAN CAST STEEL API 623 GLOBE & STOP CHECK VALVES

BOLTED BONNET CAST CARBON, STAINLESS OR ALLOY STEEL

NPS 2–24 (DN 50–600), ASME CLASSES: 150–1500

Unique non-rotating design (Easily adaptable for actuation)

All sizes and pressure classes
have conical seats.

For Bellows seal valves see our on-line catalog (VEL-BS)
at www.velan.com

Design features

- **Non-rotating stem** with precision ACME threads and burnished finish. Valve suitable for horizontal installation.
- **Universal trim.**
13Cr stem, 13Cr faced disc, and CoCr alloy faced seats API Trim 8 suitable for service up to 850°F (454°C).
- **Seat face** CoCr alloy hardfaced, ground, and lapped to a mirror finish. Conical seat machined to fine surface finish.
- **Tapered disc.**
Body guided disc accurately mates the hardfaced surface of the disc with the surface of the seat, hardfaced with 13Cr, CoCr alloy, SS 316, or Monel, ground and lapped with seat.

Disc in SS 316 hardfaced with CoCr alloy also available.

NPS 2–6 (DN 50–150) valves may have solid CA15 (13Cr) discs.
- **Body and bonnet.**
Castings are precision machined. One-piece bonnet for better alignment, fewer parts.
- **Stuffing box** machined to fine surface finish.
- **Body and bonnet joint** accurately machined to fine surface finish. Fully enclosed gasket. Gasket materials on page 4. Details on page 9.
- **Gland** has two-piece construction for easy alignment.
- **Rotating stem nut.**
Austenitic ductile iron Gr. D-2C, renewable in-line.
- **Torque arm** reduces wear on packing rings and enables better sealing and reduces torque.
- **Impactor handwheels.**
Globe and stop check valves require higher closing torques than gate valves with the same seat diameter and pressure class. The most economical mechanism for tight shutoff is the impactor handwheel. Two lugs cast under the wheel strike simultaneous blows and give 3–10 times the closing force of standard handwheels. Impactor handwheels are supplied at manufacturer's option unless specified by customer (see page 21).
- **Flanges:**
ASME Classes 150–300: $\frac{1}{16}$ " raised face.
ASME Classes 600–1500: $\frac{1}{4}$ " raised face.
Finish 125–250 AARH for all valves.

STANDARD MATERIALS

PART	MATERIALS			
Body ⁽¹⁾	WCB	WC6	WC9	CF8M
Bonnet ⁽¹⁾	WCB	WC6	WC9	CF8M
Seat ⁽¹⁾⁽²⁾	CoCr alloy faced carbon steel	CoCr alloy faced F11	CoCr alloy faced F22	CoCr alloy faced F316
Disc	CA 15 or faced A105	CA 15 or 13Cr faced F11	CA 15 or 13Cr faced F22	CF8M or F316
Disc nut	Carbon steel		SS 304 or 316	
Stem ⁽¹⁾⁽³⁾	SS 410			SS 316
Backseat ⁽¹⁾⁽³⁾	SS 410			SS 316
Packing ring ⁽¹⁾	Graphite			
Gland stud	Gr. B or B7 ⁽⁴⁾			F316, B8M or 630 ⁽⁵⁾
Gland nut	Gr. 2H			Gr. 8M
Packing flange	Carbon steel			SS
Gland bushing	Carbon steel			SS
Bonnet stud	B7	B16		B8M or 630
Bonnet nut	Gr. 2H	Gr. 4		Gr. 8M
Hinge pin	Steel			SS
Gasket ⁽¹⁾	Spiral wound stainless steel/graphite			
Torque arm	Carbon steel			
Yoke bushing	Carbon steel			Stainless steel
Stem nut	A 439 Austenitic ductile iron Gr. D-2C			
Handwheel nut	Malleable iron or steel			
Handwheel ⁽¹⁾	Malleable iron or Ductile iron			

(1) Other materials available.

(2) Hardfaced.

(3) Hardened.

(4) For eye bolts Gr.B, for studs B7 is used.

(5) For eye bolts F316, for studs B8M or 630 is used.

⁽¹⁾ Other materials available.

⁽²⁾ Hardfaced.

For Forged steel check valves, ASME Classes 900–2500
See our on-line catalog (CAT-PS) at www.velan.com.

Design features

- Body and cover.**
Precision machined castings.
Exclusive: Disc shaft does not penetrate body.
- Body and cover joint.**
Accurately machined, fully-enclosed gasket (gasket materials on page 4).
- Disc.**
Robust one-piece construction to withstand the severe shock of check valve service. Hardfaced with 13Cr, CoCr alloy, SS 316, or Monel, ground and lapped to a mirror finish. Sizes NPS 2–6 (DN 50–150) may have solid CA 15 (13Cr) disc. SS 316 disc with CoCr alloy facing also available.
- Disc assembly.**
Non-rotating disc is fastened securely to disc hanger with a lock nut and cotter pin. Disc hanger is supported on a sturdy disc carrier hinge pin of excellent bearing qualities. All parts are accessible from top for easy servicing.
- Flanges:**
ASME Classes 150–300: 1/16" raised face.
ASME Classes 600–1500: 1/4" raised face.
Finish 125–250 AARH for all valves.

HYDROFLUORIC (HF) ACID PROCESSING VALVES

Hydrofluoric acid is a highly corrosive acid. Industries using HF acid in their manufacturing process have placed an increasing emphasis on safety in using this product.

HF ACID GATE, GLOBE, AND CHECK VALVES CARBON STEEL AND MONEL, NPS 2–36 (DN 50–900)

PRESSURE CLASSES: 150–600

Fugitive emissions are a critical factor in the performance of any HF acid valve and at Velan, we have been committed to reducing emissions beyond the industry standards, and providing the highest quality products to our customers for over 60 years. Velan offers a comprehensive line of Phillips-approved and UOP-listed HF acid gate, globe, and check valves with several benefits.

Design features

- **Carbon steel bonnets** delivered with Nickel weld overlay on backseat in stem hole to combat severe alkylation conditions.
- **HF acid detecting paint** to ensure valve integrity.
- **Stem** made from aged hardened Monel K500 for increased strength and durability. **Rising stem** makes for easy visibility for open-close indications.
- **Casting design** X ray “RT” quality castings as per B16.34 acceptance standards.
- **High pressure Helium gas test.** In addition to API 598, featuring more stringent allowable leakage rates, each cast valve is subjected to a high pressure Helium gas test to ensure the valve integrity, as per ISO 15848-2.
- **Dual Nickel weld layers** in seat recess area coupled to single seal welded Monel seat ring ensuring, extended strength, corrosion resistance, and long term cost of ownership.
- **Body/bonnet wall thickness** to API 600.
- **Velan’s low-fugitive emissions guarantee.** Based on EPA Fugitive emissions regulations, API 624, ISO 15848 as well as TA-LUFT.

For more information on Velan HF Acid gate, globe and check valves see our on-line catalog (CAT-HFA) at www.velan.com

Optional design features

- **Full Nickel overlay packing box liner.**
- **PTFE seat insert** resists abrasion and corrosion.
- **Grease injector and lantern ring:** where grease injection is a requirement.

VELAN SPECIAL SERVICES

CAST STEEL CRYOGENIC VALVES

GATE VALVE

CAST CRYOGENIC GATE, GLOBE, AND CHECK VALVES AUSTENITIC STAINLESS STEEL, NPS 2–30 (DN 50–750)

PRESSURE CLASSES: 150–1500

The production, transport, and storage of liquefied gases such as oxygen, nitrogen, argon, natural gas, hydrogen, or helium (down to -425°F/ -253.9°C) presents several technical problems. Velan specially-adapted extended bonnet cast valves offer safe and efficient service.

Materials

- **Body and bonnet:** Austenitic stainless steel castings used for bodies and bonnets offer excellent impact strength, minimal heat loss, and protection against corrosion.
- **Stem:** Austenitic stainless steel. To reduce galling, stems are also offered in A479 grade XM-19 with high toughness even at extreme low temperatures, excellent low friction, and galling-free movement at points of stem contact.
- **Wetted parts:** all Austenitic stainless steel and CoCr alloy.
- **Stem nut/yoke bushing:** Austenitic ductile iron Gr. D-2C.
- **Packing:** PTFE or graphite packing protected from freezing by a column of insulating gas.
- **Seating faces:** CoCr alloy is used to prevent seizing and galling. When extremely tight shutoff is required, globe and check valves are supplied with Neoflon, PTFE, or other soft inserts.
- **Bolting:** Strain-hardened Austenitic stainless steel.
- **Lubrication of stem nut:** Exxon Nebula Lubriplate No. 930-AA or Shell Darina EPI or equivalent.

Design features

- **Extended bonnets** with sufficient gas column length, usually specified by customer, are supplied for all valves to keep the stem packing at sufficient distance away from the cold fluid to remain functional.
- **Flexible wedges** with CoCr alloy seating faces for cryogenic service.
- **Neoflon inserts** are available for globe, piston, and swing check discs.
- **Cleaning:** All cryogenic valves are thoroughly degreased and cleaned and pipe ends are sealed to prevent contamination.

For more information on cryogenic valves see our on-line catalog (VEL-CRYO) at www.velan.com.

GLOBE VALVE

VELAN SPECIAL SERVICES

BLOCK AND BLEED GATE VALVES FOR CHEMICAL AND PETROCHEMICAL INDUSTRIES

Valve shown above has a special "Pipeline" bonnet. Standard bonnets with regular yoke also available.

CAST STEEL API 600* BLOCK AND BLEED GATE VALVES ASME CLASS: 150, NPS 2–60 (DN 50–1500) ASME CLASS: 300, NPS 2–36 (DN 50–900)

FLANGED OR BUTT WELD ENDS

Design features

- **Positive shutoff** with visual or remote proof of seat tightness.
- **No product contamination** due to absolute tightness.
- **Dual seating.** Elastomer-to-metal seat plus metal-to-metal secondary seal.
- **Fire safe.** The metal-to-metal seat ensures tightness if the secondary elastomer seat is damaged during the fire.
- **PTFE seat insert** resists corrosive media, has high abrasion resistance, and operates up to +400°F (204°C).
- **Seat hardfaced** with SS 410 and seal welded.

Easy in-line valve reseating

Seats are hardfaced with SS 410 and welded-in for lifetime service. A worn soft seat insert can easily be replaced after removal of the wedge from the body. Shut off flow and relieve pressure before replacing the seat insert.

Specifications for seat insert materials

Type	Maximum operating temperature	Not recommended
PTFE	-100 to +400°F -73 to +204°C	Fluorinated hydrocarbons
Buna-N	-20 to +200°F -29 to +93°C	Halogenated hydrocarbons, nitrobenzene, aniline, hydraulic fluids, skydrol, cellulube, pydrazil, acetone
Viton	-20 to +400°F -29 to +204°C	Acetone, anines, anhydrous ammonia, hot hydrofluoric acid, ester, ethers

Cavity over-pressurization protection

Block and bleed valves are capable of trapping fluid in the cavity between the seats when in the closed position. If subjected to an increase in temperature, an excessive build up of pressure can occur, which may result in a pressure boundary failure. It is the responsibility of the user to assure that measures are taken to prevent the pressure from exceeding the rating of the valve.

Cavity over-pressurization protection is not provided by Velan, unless specified. Velan can provide alternative solutions to safeguard against cavity over-pressurization. Please contact us to determine the correct solution for your use.

(1) For gate valves larger than NPS 42 (DN 1050), in pressure class 150 and 300, and gate valves larger than 24" in pressure classes 600 and greater, wall thickness is based on B16.34 plus additional wall thickness allowance.

GEAR, ELECTRIC, AND CYLINDER ACTUATORS

Gear actuators

Gearing is generally applied to valves to make operation easier. The gearing may be, of the spur, bevel, or worm type—any of which may be applied to Velan valves.

The gears and gear brackets may be either cast iron or cast steel and may have cast or cut teeth, depending on the loads and the application. Gearing is too often neglected when valve operation is considered, resulting in unsatisfactory operation that requires expensive changes.

Electric actuators

Motorized controls may be applied to valves of almost any size for operation in practically any position or location.

All units, whether installed directly on a valve or on a floor stand, can be manually operated in case of power failure. The units are available for either alternating or direct current.

Motor units supplied by Velan are the high-torque type with windings impregnated to resist both oil and moisture. They are completely weather-proof, explosion-proof (optional), and dust and steam tight. Various sizes and styles are available for different applications, and systems can be varied to fit special requirements.

Cylinder actuators

The most commonly used cylinders are actuated by air, but oil and water types are also available if required. In all designs, the valve stem normally serves as a piston rod with the disc fastened directly to it. Tail rods are also supplied as standard equipment to serve as position indicators and for emergency opening. Handwheels and gear heads can be mounted on top of cylinders for operation in an emergency, which may arise due to the loss of operating medium in the cylinder.

Velan cylinders can be furnished with mounting pads for one of the commercial cylinders or valve positioners that provide throttling control. High-pressure cylinders are also available for specific applications.

Valve actuator sizing

The Velan philosophy for selecting an actuator is to calculate the required thrust and torque to operate the valve at the required service conditions. A reasonable margin of excess actuator capability over that required is always allowed for in the final actuator selection, but grossly oversized actuators are avoided.

Because of the wide variations in system operating conditions, actuator sizing is based on the following:

Actuator type	Line pressure	Differential pressure (closed)	Power supply
Electric	Specified by customer	Specified by customer	Voltage, type, phase, specified by customer
Pneumatic	Specified by customer	Specified by customer	Air pressure specified by customer
Hydraulic	Specified by customer	Specified by customer	Hydraulic pressure specified by customer
Handwheel gear actuated	70% of CWP ⁽¹⁾ unless otherwise advised by customer	70% of CWP ⁽¹⁾ unless otherwise advised by customer	200 lb. rimpull ⁽²⁾ unless otherwise advised by customer

(1) CWP = cold working pressure per ASME B16.34 at 100°F.

(2) Rimpull is defined as the total tangential force acting on the outer rim of the handwheel (e.g., 200 lb rimpull requires 100 lb force per hand). This rimpull figure is given for closing/opening conditions. For running conditions (travel from open to closed or vice versa), the rimpull is considerably less. For details, contact the company.

OTHER ACCESSORIES

Chain wheels

Chainwheels are used to enable remote actuation of a valve that is typically at a higher elevation than the person operating it. Chainwheels may be used on Velan cast steel valves covered in this catalogue. Velan strongly recommends the use of appropriately designed safety accessories to prevent the risk of the chainwheel falling in the event it becomes detached from the valve assembly. Please contact Velan for additional information on the correct application of chainwheels on our valves.

Floor stands

Floor stands are available in a number of sizes, and the size to be used depends on the stem size and stem load of the valve.

Lifting points

Lifting points are available to facilitate handling of larger and heavier valves.

BYPASSES

AVAILABLE FOR ALL VELAN CAST STEEL VALVES IN ACCORDANCE WITH MSS-SP45 - SERIES A

General Notes:

- Upon prolonged exposure to temperatures above 800°F, the carbide phase of steel may be converted to graphite. Permissible, but not recommended for prolonged use above 800°F.
- Use normalized and tempered material only.
- Not to be used over 1,100°F.
- The deliberate addition of any element not listed in ASTM A 217, Table 1, is prohibited, except that Ca and Mg may be added for deoxidation.
- At temperatures over 1,000°F, use only when the carbon content is 0.04% or higher.
- Not to be used over 800°F.

* 13Cr or Monel trim also available in soft form (less than 237 HB). Non-cobalt hardfacing also available.

SOUR SERVICE VALVES

Where NACE or sour service is specified, valves comply with NACE MR0103 or MR0175 / ISO15156. It is the end user's responsibility to install the valves in the service conditions permitted by these standards.

For trim material (wedge/disc surface, seat surface, and stem) see page 27.

TRIM	
NA, ND, NE, NF:	B7M / 2HM Rc. 22 Max.
NB, NC, NN:	B7M / 2HM, B8M / 8 or Rc. 22 Max.

How to order cast steel gate, globe, and check valves

Type of connection	Size of connection	Pressure rating	Valve type	Body/bonnet style	Body material	Trim material
A	B	C	D	E	F	G
						
F	1 0	— 0	0 6	4 C	— 0 2	T Y

Example: Flanged NPS 3 (DN 80) Class 150 cast carbon steel full bore gate valve with TY trim.

The figure numbers shown on this key are designed to cover essential features of Velan valves. Please use figure numbers to ensure prompt and accurate processing of your order. A detailed description must accompany any special orders.

A TYPE OF CONNECTION					
A	Special	D	DIN Flanged	P	Flanged B16.47 series B (API 605)
B	Butt weld	E	Welded studs (butt weld)	R	Flanged ring joint
C	Combination	F	Flanged B16.5 (B16.47 series A)	U	Undrilled flanges

B SIZE OF CONNECTION											
Customers have the choice of specifying valve size as part of the valve figure number (B) using the numbers below, or indicating valve size separately. Sizes shown in NPS (DN)											
EXAMPLES:											
F10-0064C-02TY (valve size is part of figure number)											
3 (80) F-0064C-02TY (valve size is shown separately)											
08	2 (50)	14	6 (150)	21	18 (450)	30	30 (750)	42	42 (1050)	56	56 (1400)
09	2½ (65)	15	8 (200)	22	20 (500)	32	32 (800)	44	44 (1100)	60	60 (1500)
10	3 (80)	16	10 (250)	23	22 (550)	34	34 (850)	46	46 (1150)	64	64 (1600)
11	3½ (90)	18	12 (300)	24	24 (600)	36	36 (900)	48	48 (1200)	99	Special
12	4 (100)	19	14 (350)	26	26 (650)	38	38 (950)	50	50 (1250)		
13	5 (125)	20	16 (400)	28	28 (700)	40	40 (1000)	54	54 (1350)		

C PRESSURE RATING									
0	150	1	300	2	600	3	1500	7	900
X	Butt weld								

D VALVE TYPE					
01	Flow control	07	Stop globe	09	Needle
06	Full port gate	08	Stop check	11	Swing check

E BODY/BONNET STYLE					
4	Vertical	A	Special	C	Bolted bonnet (cast)
		E	Extended bonnet (cryogenic)	V	Cast bolted bonnet bellows seal

F BODY MATERIAL⁽¹⁾					
01	Special	09	C12	19	Monel M35
02	WCB	11	CF8	23	Alloy 20
03	WC1	12	CF3	25	LCB
04	C5	13	CF8M	27	LC3
05	WC6	14	CF3M	28	CG8M
06	WC9	15	CF8C	29	CG3M

(1) Pressure-containing valve components which may include body, bonnet, cover and body end.

Note: CoCr alloy as used throughout this catalog refers to cobalt chrome hardfacing alloys as supplied by Kennametal Stellite™, and other approved manufacturers.

For a more detailed list of available trims, contact the factory or visit our web site at www.velan.com.

G TRIM (standard trims)					
Code	Wedge/disc surface ⁽²⁾	Seat surface ⁽²⁾	Stem	API Number	Bellows ⁽³⁾ (if applicable)
MS	CoCr alloy ⁽⁴⁾	CoCr alloy ⁽⁴⁾	316	16	321

XS	CoCr alloy ⁽⁴⁾	CoCr alloy ⁽⁴⁾	Monel		
XX	Monel	Monel	Monel	9	
XY	Monel	CoCr alloy ⁽⁴⁾	Monel	11	

- Base material is either the same as the body or solid trim at manufacturer's option.
- Bellows material shown as standard, Inconel can be used in lieu of 321 and Hastelloy C in lieu of Inconel, where design and/or pressure class applicable.
- CoCr alloy refers to cobalt-chrome alloys in Grade 6 (e.g. AWS CoCr-A, UNS 30006 & 30106).
- 616HT manufacturer's standard. (F91 and C12A only).
- Inserts may be in seat or wedge at manufacturer's option.
- Valves with "NACE" figure numbers will meet the material requirements of NACE MRO103 and MRO175/ISO 15156. It is the equipment user's responsibility to ensure that the materials are suitable for the intended service.
- 630 SS is a Precipitation - Hardenable Stainless Steel (Also referred to as 17-4 PH stainless steel) Has superior Mechanical properties and adequate corrosion resistance when compared to 410 SS.
- XM-19 is an austenitic stainless steel known for its superior mechanical properties and corrosion resistance compared to 316 SS.
- An austenitic stainless steel which has comparable mechanical properties and corrosion resistance compared to 316.

The most comprehensive line of industrial forged and cast steel gate, globe, check, ball, butterfly, and knife gate valves and steam traps.

ASME pressure classes 150–4500 in carbon, alloy, and stainless steel
